

The digital piano reimaged - CASIO presents an innovative digital piano concept

PX-S7000HM

Norderstedt, September 8th 2022

Under the slogan **"In Harmony with Life"**, CASIO presents its new digital piano concept in the form of the Hero Model Privia PX-S7000 in 360° design. Highly innovative and pragmatic, the PX-S7000 presents itself as a contemporary alternative to the traditional digital piano, which integrates perfectly into the interior design of the modern home both visually and functionally.

"Style, Reimagined" - The PX-S7000 design convinces with clear lines. The stand in particular appears light and filigree compared to the classic console look. The high-gloss, polished surface*, similar to the surface of current smart devices, the transparent acrylic music stand and, last but not least, the overall material mix, which also contains textile elements, underline this lightness and modernity and reflect a contemporary, high-quality interior. Harmonious in every respect and simply beautiful from every angle. Speaking of "harmonious": the flagship PX-S7000 is available not only in black and white but also in the deep yellow "Harmonious Mustard" and thus sets a new, sophisticated color accent.

In addition to the high-quality sound generation and the newly developed "Smart Hybrid Hammer Action" keyboard made of wood and resin, the PX-S7000 has a new type of sound system with four independently amplified broadband speakers that can be adjusted to different positions in the room. In this way, the piano can not only be placed on the wall but anywhere in the room

* Only the Harmonious Mustard model has a polished finish

With over 400 high-quality tones, the PX-S7000 is an absolute specialist when it comes to the variety of sounds. When selecting the sounds, special attention was paid to the piano sounds. A large number of different piano, grand piano and e-piano sounds can be found in the instrument. A special feature here are the so-called "Best-Hit" pianos, which are unmistakably reminiscent of the piano sounds of world-famous POP and ROCK hits from different decades and genres. The selection is completed with a variety of organ, strings and synthesizer sounds and many more sounds. As the icing on the cake, a microphone can also be connected directly to the instrument and played back via the integrated loudspeakers, and the vocals can be provided with various effects.

The numerous sound and effect setting options can not only be controlled and saved directly on the instrument, but also intuitively operated via the CASIO MUSIC SPACE app, which is available free of charge. It all works Wirelessly via Bluetooth®, of course, with the Wireless MIDI and Audio Adapter, which, in addition to app and MIDI connectivity, also allows audio streaming from smartphones or tablets via the integrated speakers of the PX-S7000.
